

All-In-One Cleaning & Pretreatment System

From small job shops to high production environments, our innovative station design offers a cost-effective metal treatment solution. Midwest spray wand stations allow for convenient cleaning, rinsing, and pretreatment on parts of all sizes, configurations, and complexities.

Ideal for low quantity runs, the consistent results achieved with each use help improve paint adhesion and corrosion protection. Easy application and minimal waste add value by reducing labor and chemical costs.

Our simple 5 step installation process makes it possible to be up and running in less than a day. All Midwest spray wand stations are designed for convenient shipping and delivery. The integrated fork truck supports make moving and placement quick and trouble-free.

Simple 5 Step Installation Process

STEP 1: Set

Set spray wand station on shop floor, no trenching required

STEP 2: Raise

Raise station top and insert support columns into containment floor

STEP 3: Hang

Hang over-spray curtain on side walls

STEP 4: Install

Install exhaust and stack components for clean and safe operation

STEP 5: Hook Up

Hook up application unit, spray wands, and integrated lighting package

System Start-Up

You're ready for production
